They Have To Do A Better Job

We in the Bay Delta are one of the most importune places in the State. Because it's where the water is. State & Federal water Agencies haven't done very good job of it. It seems to me planing for diverting more water has been the only plan they have come up with. The Delta. has only so much water & we can't send all to southern Cal.

I keep hearing about the so called development projects which will capture true flood flows that would otherwise reach the bays or ocean. What is a true flood flow? This flood flows have to reach the bays and to keep are drinking water and fish from further contamination. How long can we continue export water and import valley runoff waste water from farm land.

We in the Delta have to be on are guard at all times. No one will watch it for us.

The South Delta Progran Plan. Is a plan of operable flow control barriers or dams to keep fresh water from upper rivers mixing with San Joaquin valley farm drain water. Also more fresh water for the pumps. It's to help keep there toxic drainage water from being pumped back to there fields. They will keep putting more & more agricultural waste water in are rivers drinking water.

The General Profered Progran Plan. Calfed is up to 3 million acre ft. surface & ground water storage up by Sacramento. An other 3 million acre ft. in the south Delta off the Aqueduct. What will are Delta Farmers Farm? Storage Water? Calfed keep sayings Potential Diversion Channel at Hood is not part of the Program. But its still on the Map's.

Some 400 people were at the last calfed meeting in Stockton. Most were Pretty upset.

If you are a fisher man a hunter a boater a swimmer a harbor owner bate shop owner yacht club members restaurants owner farmer home owner gardener or anyone who uses water I hope you are here.

Tell Calfed what you think.

Thank you

Joe Horn
